

## Global Pollination Project: Policy Scoping Report

In collaboration with EnAct International, FES undertook a scoping of the existing and possible future policy in South Africa that had the potential to impact on pollination services.

The report provided to the Global Pollination Project focused on:

- a. Identifying relevant policies and legislation at different levels (local, provincial, national).
- b. Analysing policies to determine which ones had potential to achieve the desired outcomes of the global pollination project.
- c. Making recommendations on which policies should be investigated further.

In compiling the report specific attention was given to policy that guided the management of alien invasive plants, the conversion of virgin land, the regulation of pesticides and the use of market incentives during the analysis and when developing recommendations and finally when drawing conclusions. EnAct International may be approached for more information on the report at <http://www.enact-international.com/index.htm>.
